

## Battery Performance and Cycle Counting

### BPM-100

- Tracks number of times battery string supplies power to load
- Tracks duration of each load event
- Sounds alarm if charger voltage or ambient temperature is out of tolerance

#### Operating Features

- Voltage readings updated every 15 seconds
- Temperature and current (optional) read every minute

#### Operating Features

- Continuously checked for user input
- Display continuously updated
- User programmable alarm levels
- Stores data on alarms, load cycles and low voltage
- Categorizes all cycles by time duration
- Programmable cycle monitoring function
