

ODBC Problem:

We have found the new MS Office 2000 and any new MS program that uses ODBC will automatically update your ODBC engine. Reinstalling the software will not reset the ODBC engine back to the original version. The fix is as follows:

If you have installed another program that has updated the ODBC Engine from 3.0 to 3.5:

1. Verify the ODBC engine – Control Panel/ ODBC/ About – to see if the ODBC engine version is now 3.5.1x.xx from 3.0.xx.xx. If it is the new version, then the new program has installed the new ODBC engine.
2. Install the following three ODBC DLL's to the c:\windows\system\ for Win95 and 98 machines. For NT, put the same DLL's into the c:\winnt\system32\ directory:

ODBCJI32.DLL, ODBCJT32.DLL, ODBCTL32.DLL. If they already have existing DLL's, rename them to .OLD before copying in the new DLL's.
